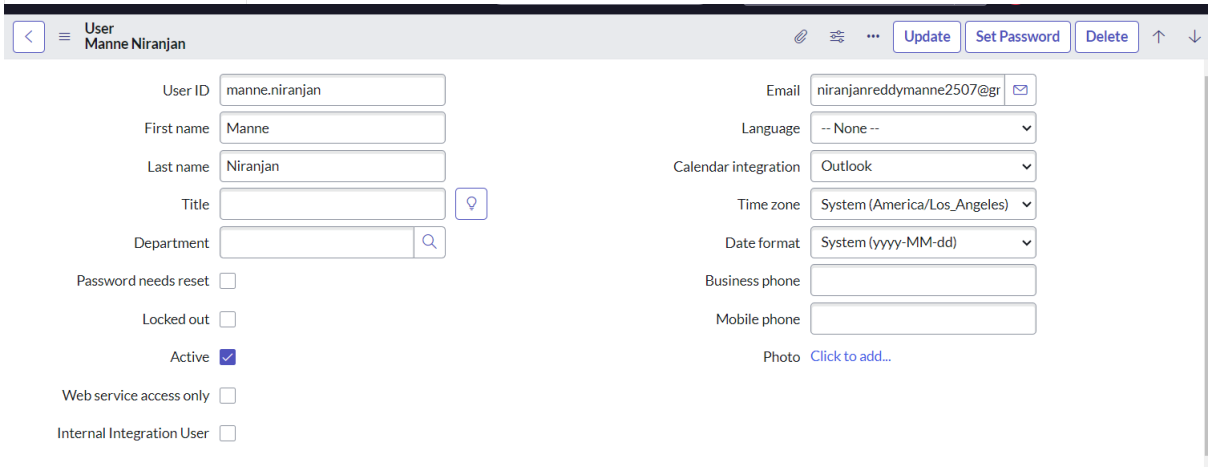
Project documention

Date	08 April 2026
Team ID	SWTID-2026-2339
Project Name	Streamlining Ticket Assignment for Efficient Support Operations
Maximum Marks	

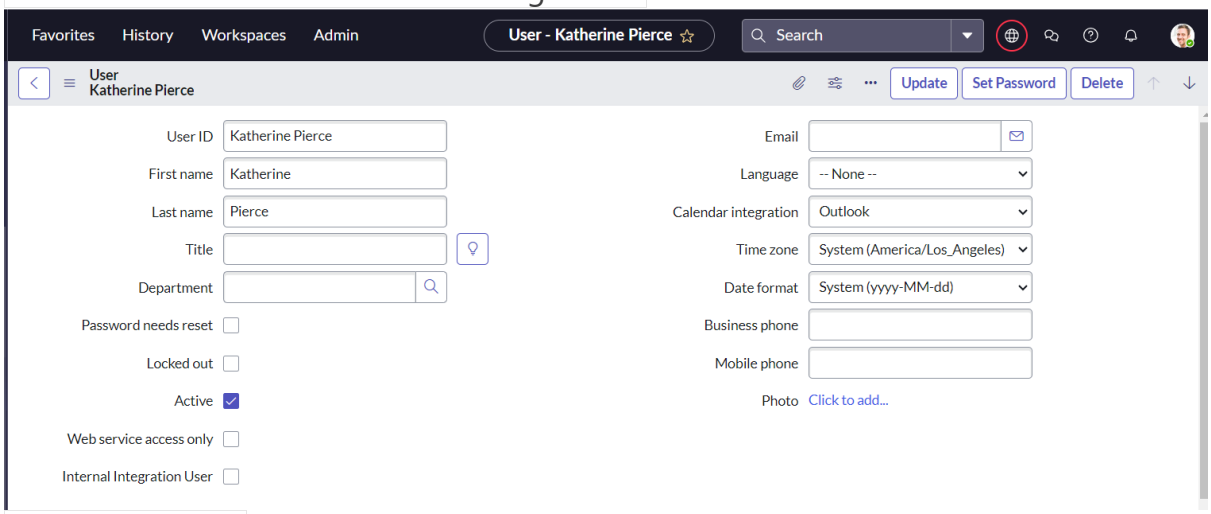
Create users:

1.Open service now.
2.Click on All >> search for users
3.Select Users under system security
4.Click on new
5.Fill the following details to create a new user
6.Click on submit



Create one more user:

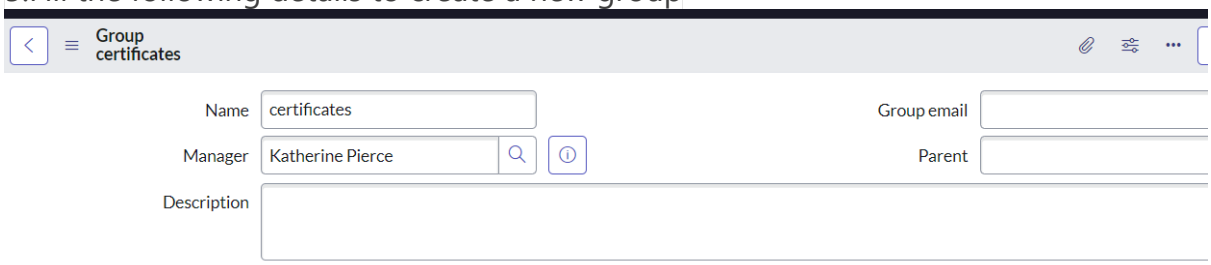
Create another user with the following details



7.Click on submit

Create groups:

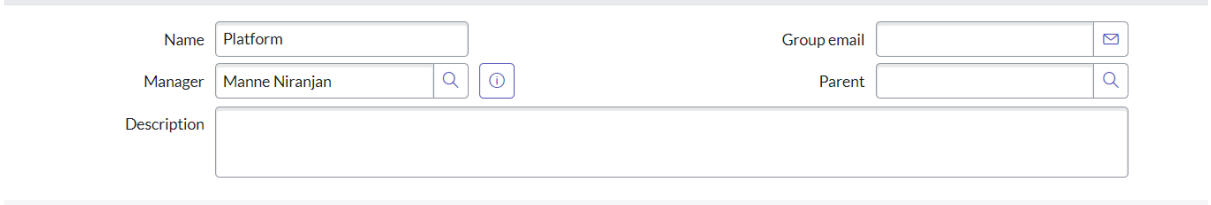
1.Open service now.
2.Click on All >> search for groups
3.Select groups under system security
4.Click on new
5.Fill the following details to create a new group



6.Click on submit

Create one more group:

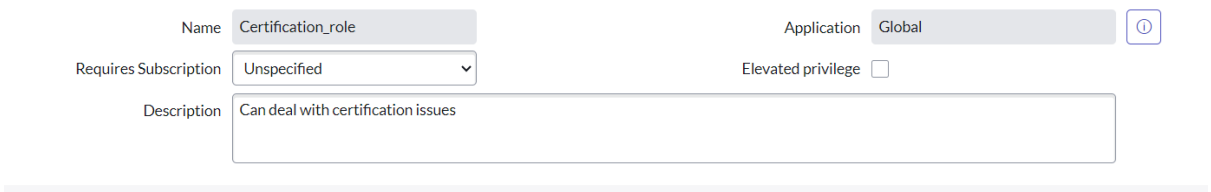
1.Create another group with the following details



2.Click on submit

Create roles:

1.Open service now.
2.Click on All >> search for roles
3.Select roles under system security
4.Click on new
5.Fill the following details to create a new role



6.Click on submit

Create one more role:

1.Create another role with the following details

Name	Platform_role	Application	Global
Requires Subscription	Unspecified	Elevated privilege	☐
Description	Can deal with platform related issues		

2.Click on submit

Create table:

1.Open service now.
2.Click on All >> search for tables
3.Select tables under system definition
4.Click on new
5.Fill the following details to create a new table
6.Label : Operations related
7.Check the boxes Create module & Create mobile module
8.Under new menu name : Operations related
9.Under table columns give the columns

	Column label	Type	Reference	Max length	Default value	Display
	Created by	String	(empty)	40		false
	Created	Date/Time	(empty)	40		false
	Sys ID	Sys ID (GUID)	(empty)	32		false
	Updates	Integer	(empty)	40		false
	Updated by	String	(empty)	40		false
	Updated	Date/Time	(empty)	40		false
×	Assigned to group	Reference	Group	40		false
×	Assigned to user	Reference	User	32		false
×	Comment	String	(empty)	40		false
×	Issue	String	(empty)	40		false
×	Name	String	(empty)	40		false
×	Priority	String	(empty)	40		false
×	Service request No	String	(empty)	40	javascript:getNextObjNumberPadded();	false
×	Ticket raised Date	Date/Time	(empty)	40		false
+	*Insert a new row...*					

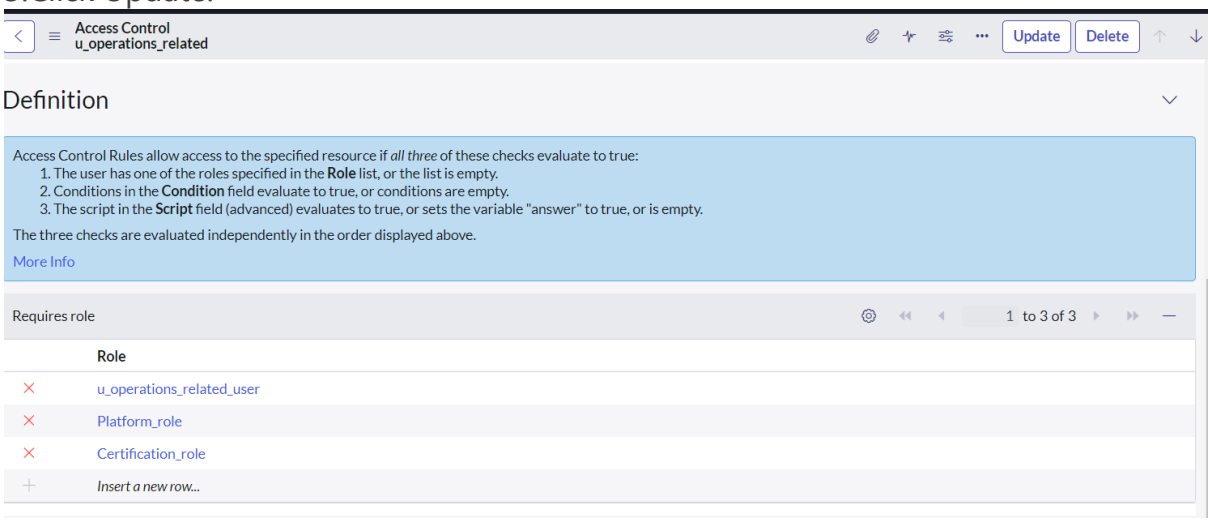
10.Click on submit
11.Create choices for the issue filed by using form design
Choices are
unable to login to platform
404 error
regarding certificates
regarding user expired

Assign roles & users to certificate group:

1.Open service now.
2.Click on All >> search for tables
3.Select tables under system definition

4.Select the certificates group
5.Under group members
6.Click on edit
7.Select Katherine Pierce and save
8.Click on roles
9.Select Certification_role and save

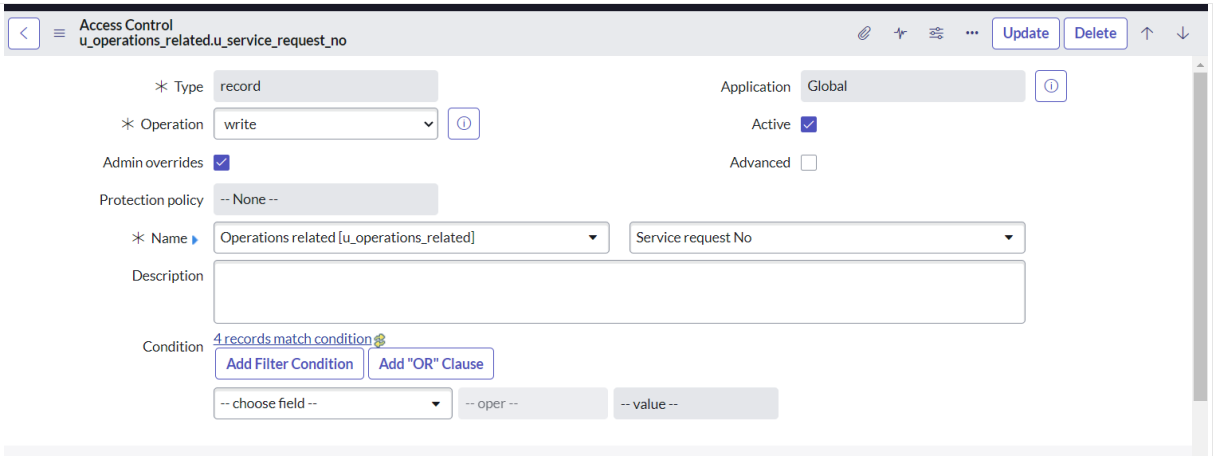
1.Streamling ticket assignment for efficient support operation:
2.Open ServiceNow and navigate to All → System Definition → Tables.
3.Search and open the Operations Related table.
4.Click on Application Access.
5.Open the u_operations_related.read operation.
6.Click your profile (top right) and Elevate Role → security_admin.
Under Requires role, insert a new row and add:
1.Platform_role
2.Certification_role
3.Click Update.



4.Open the u_operations_related.write operation.

Create ACL:

1.Open service now.
2.Click on All >> search for ACL
3.Select Access Control(ACL) under system security
4.Click on new
5.Fill the following details to create a new ACL



6.Scroll down under requires role
7.Double click on insert a new row
8.Give admin role
9.Click on submit
10.Similarly create 4 acl for the following fields

u_operations_related.u_priority	write	record	true	admin	2024-04-16 22:32:12
u_operations_related.u_ticket_raised_date	write	record	true	admin	2024-04-16 22:30:22
u_operations_related.u_name	write	record	true	admin	2024-04-16 22:29:00
u_operations_related.u_issue	write	record	true	admin	2024-04-16 22:23:31
u_operations_related.u_service_request_no	write	record	true	admin	2024-04-16 22:17:14

Create a flow to assign operation ticket to group:

1.Open service now.
2.Click on All >> search for Flow Designer
3.Click on Flow Designer under Process Automation.
4.After opening Flow Designer Click on new and select Flow.
5.Under Flow properties Give Flow Name as " Regarding Certificate".
6.Application should be Global.
7.Select Run user as " System user " from that choice.
8.Click on Submit.

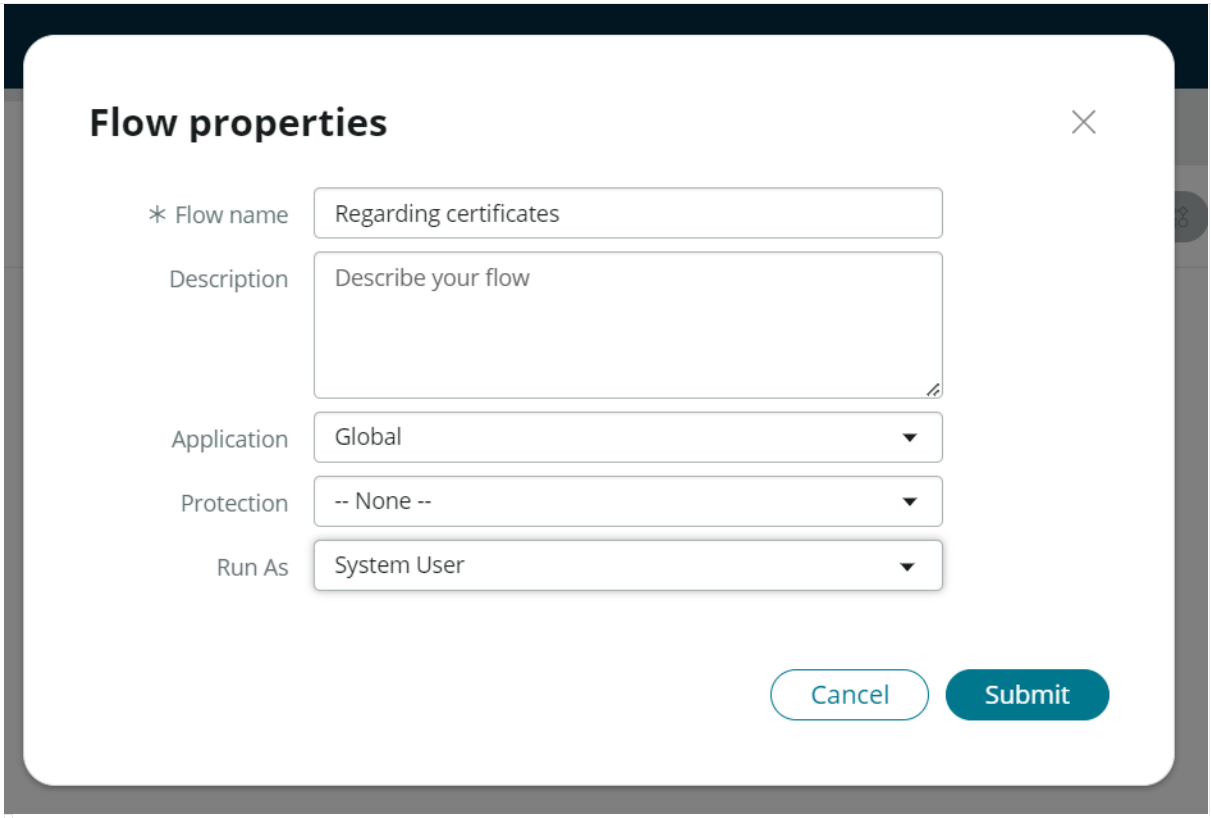
1.Click on Add a trigger
2.Select the trigger in that Search for “create or update a record” and select that.
3.Give the table name as “ Operations related ”.
4.Give the Condition as
5.Field : issue
6.Operator : is
7.Value : Regrading Certificates
8.After that click on Done



.

9.Now under Actions.

1.Click on Add an action.

2.Select action in that search for " Update Record ".

3.In Record field drag the fields from the data navigation from left side

4.Table will be auto assigned after that

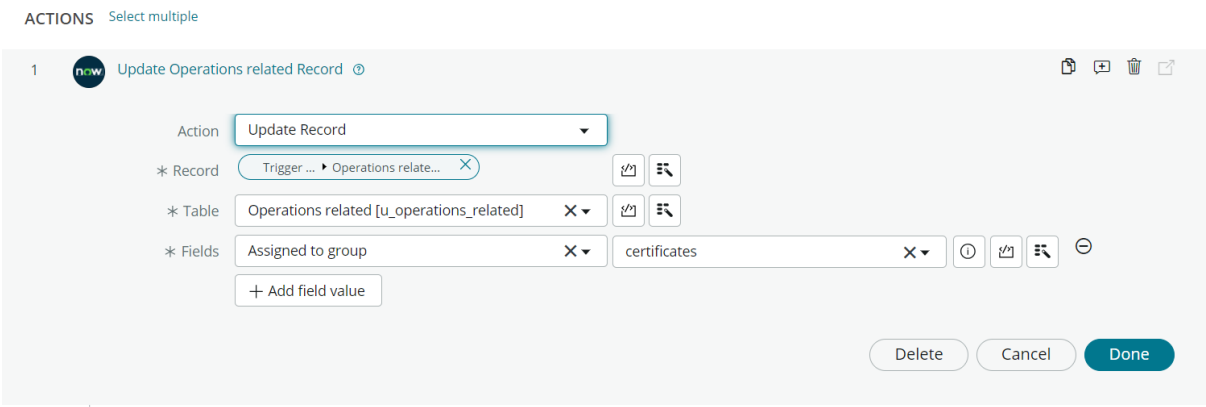
5.Give the field as " Assigned to group "

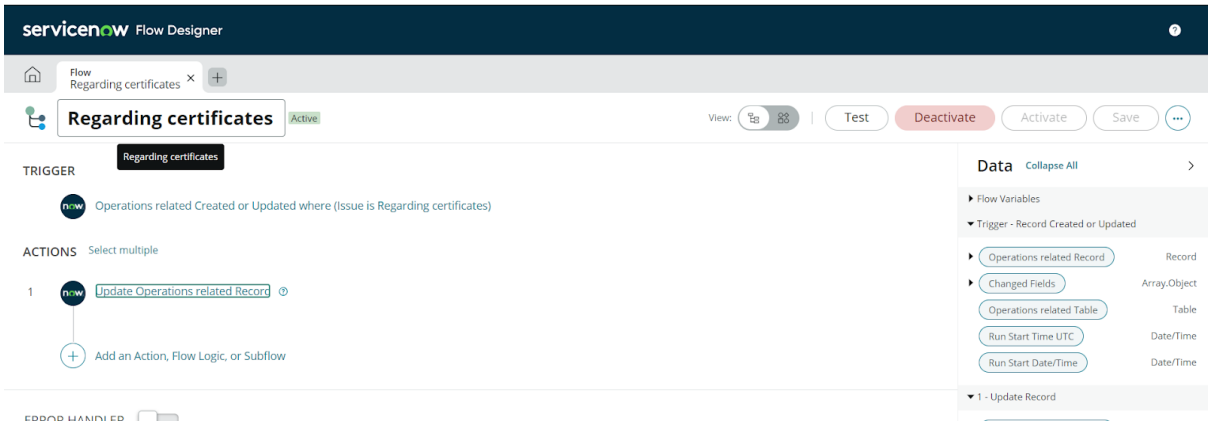
6.Give value as " Certificates "

7.Click on Done.

8.Click on Save to save the Flow.

9.Click on Activate.





Indetail conculation:

The implementation of the automated ticket routing system at ABC Corporation has significantly improved support operations by eliminating manual ticket assignment and reducing routing errors. Through structured configuration of groups, roles, access controls, and automated flows, tickets are now assigned instantly to the appropriate support teams based on predefined conditions.
This automation reduces reassignment delays, improves accountability, and ensures that issues are directed to the correct team from the start. By combining role-based security with workflow-driven routing, the solution enhances operational efficiency and supports faster, more reliable issue resolution across the organization.
