Project Design Phase
Solution Architecture

Date	08 April 2026
Team ID	SWTID-2026-2339
Project Name	Streamlining Ticket Assignment for Efficient Support Operations
Maximum Marks	4 Marks

Solution Architecture:

Intelligent Orchestrated Routing is a centralized automation layer that replaces manual dispatch with a "logic-first" engine. It instantly analyzes incoming ticket data (intent, urgency, and customer tier) and matches it against a real-time database of agent availability and specific skill sets.

The Simple Architecture (3-Step Flow)

1. **Categorization Engine (The Brain):** An automated trigger analyzes the ticket text to assign a **Priority** (e.g., Critical vs. Low) and a **Tag** (e.g., Billing vs. Technical).
2. **The Skills Matrix (The Map):** A digital directory that identifies which agents are online and which specific "expert" tags they hold.
3. **The Assignment Logic (The Matchmaker):** A rule-based system that pushes the ticket directly to the available agent with the highest matching skill score, bypassing the need for a manual coordinator.
